FURAHA & BARAKA FARMS

Your Carbon Credit Solutions Partner

Who We Are

From Climate Ambition to Measurable Action

Furaha & Baraka Farms (FBF) is a global integrated climate-action practice supporting organisations turn climate and sustainability ambitions into measurable action and lasting value. We work at the intersection of climate, nature, technology and people, helping organisations understand their environmental challenges, identify the interventions that matter most, implement practical solutions with local partners, measure what happens on the ground, and communicate results with credible evidence. Our work brings together climate and ESG measurement, ecological restoration, digital monitoring and verification, regenerative and circular solutions, and climate leadership and green skills.

What We Do

1. Carbon Accounting, Greenhouse Gas (GHG) Emissions Assessments, and Environmental, Social and Governance (ESG) Reporting. We support organisations to set environmental baselines, assess greenhouse gas emissions and nature-related risks, identify key issues, and convert any fragmented data into clear climate and ESG priorities. Our services include GHG inventories, assessments of Scope 1, Scope 2, and relevant Scope 3 emissions, climate analysis, ESG indicator frameworks, emissions-reduction planning, and help with disclosures.

2. Reforestation & Carbon Offset Projects. We translate climate and nature objectives into practical, measurable restoration and land-based interventions. Our work spans terrestrial restoration, reforestation, agroforestry, mangrove and blue-carbon restoration, climate-smart agriculture, and carbon-project feasibility and readiness. We approach restoration as a process - not a planting event - combining ecological assessment, appropriate species selection, nursery quality, field implementation, post-care, replacement, monitoring, and adaptive management.

3. Digital Carbon, Monitoring Reporting and Verification Services. We connect field activities to the evidence required for optimal management, reporting, and assurance. Through mobile data, GPS, GIS, remote sensing, dashboards, and controlled evidence systems, FBF creates traceable links between projects, locations, activities, quantities, people, monitoring events, and outcomes. Technology improves traceability and supports decision making but does not replace field evidence or professional judgment.

4. Circular Economy and Regenerative Agriculture. We help organisations and communities retain ecological and economic value within their landscapes. Our work includes regenerative agriculture, biochar, resource recovery, local sourcing, and nature-based value chains and businesses. We promote practices that strengthen soil and water resilience, enhance biodiversity, recover resources, and create new livelihood opportunities.

5. Climate Leadership & Green Skills Development. Climate action is sustainable when people have the knowledge, skills, and confidence to lead and sustain it. FBF partners with schools, communities, farmer groups, institutions, field teams, and young people to help them develop climate literacy, leadership, and practical skills for restoration, digital work, sustainable agriculture, circular businesses, and community stewardship. Our education and skills programmes guide people from awareness to participation, then to competence, and finally to leadership.

Trusted by Our Partners

Measure → Plan → Implement → Verify

One accountable partner for the entire climate journey: measure accurately, plan credibly, implement at scale, and verify independently with audit-ready evidence powered by our agentic AI platform. This is how we make your ESG delivery faster, more transparent, more believable and reliable than any alternative.

Ready to turn commitment into verified climate impact? Let's build it together.
